### Abstract

The geometric parameters of dl- and d-tetranuclear iron(II) tartrates  $[\text{Fe}_4(\text{d-L})_2(\text{l-L})_2(\text{H}_2\text{O})_8]^{4-}$  and  $[\text{Fe}_4(\text{d-L})_4(\text{H}_2\text{O})_8]^{4-}$  (H<sub>4</sub>L is tartaric acid) were optimized using the molecular mechanics method (MIND program, Dashevskii-Plyamovatyi model).
